#### **CAPTURING with REAL TIME SCENE DETECTION**

- ScLive has automatic scene splitting while capturing - each scene is written into its own .avi file in realtime.
- It splits the scenes based on the recording-time embedded in the DV-streams or based on optical content.
- During the Capturing process the Scenes are displayed with pictures.
- The captured files can be renamed, moved or deleted while or after capturing.
- After Capturing has stopped, the whole tape is now a few hundred scenes on your harddrive.
- The Scene-detection can be switched off and a whole tape can be captured into a single .avi file or multiple .avi files with 1GB, 2GB or 4GB each.

#### **SEAMLESSLY CAPTURE/ PLAYBACK**

- Due to the file-size or file-format limitation under the FAT32 file-system (Windows 98 SE, Windows ME) .avi files are limited to 2 or 4 GB, ScenalyzerLive provides a solid Workaround for this 2/4GB problem.
- With ScenalyzerLive you can seamlessly capture and playback any length of video.
- When the file size reaches the limit you specify, a new file is automatically and seamlessly created on the fly.

#### **TIME-LAPSE CAPTURING**

- With ScenalyzerLive you can use Time Lapse Capturing to create impressive effects that can be

used in your final video.

- Record e.g. one hour of a Sunset and then use ScLive to capture the video into an e.g. 15 seconds .avi file which will show the sunset 240 times faster.

#### QUICKLY INDEX YOUR TAPE

- Scan a Mini-DV Tape for all Scenes in **just 5 Minutes**
- Use Capture / Tape Index and ScLive will capture the whole tape in FastForward.
- after approx. 5 minutes of indexing, ScLive shows a list of all scenes found on the Tape.
- This list can be used for Smart Batchcapturing: Simply set a checkmark on each scene that you want to capture in full motion, and then start "Smart Batchcapturing"

#### SMART BATCHCAPTURING

- 'Smart Batch capturing' can position the tape correctly even if the tape has 'interrupted time codes' !
- Simply choose the Scenes you want to capture from the tape-index
- The selected Scenes are automatically, quickly and frame-accurately captured - ScLive still treats your Camera/VCR nicely.
- Normally ScLive rewinds to the first scene and then plays or fast-forwards to all further scenes without any more rewinding or 'heavy' positioning.

#### Easy STILLS EXPORT

- With ScenalyzerLive you can quickly export stills in both, jpg or bmp format. This can be done either from live-pictures from your camera or frame-accurately from .avi files by simply pressing 'F2'. ScenalyzerLive also gives you the option to choose 3 possible resolutions with optional de-interlacing, cropping and with adjustable jpg compression factor.
- It was probably never so easy to get high-quality pictures from your videos to quickly send them by e-mail or keep them for further reference on a CD-ROM.

#### more DETAILS:

- ScLive writes TYPE 1 or TYPE 2 DV-AVI FILES, WAV-only, Studio-DV files with Scene-Index or RT2000 files with separate Audio and Canopus compatible Files.
- ScLive's advanced buffering-structure makes it very 'dropped-frame'-resistant and nicely behaved to other programs running at the same time.
- Multi-file capture and playback
- ScLive works with PAL and NTSC.

#### Canopus DV Storm, EZDV and Raptor RT Support:

- **ScenalyzerLive now supports capturing from the Storm, the EZDV and the Raptor RT Canopus Cards (thanks to Canopus for the help!)**
- You need the latest drivers for your Canopus-Card
- In ScLive, set the file-type to "Canopus Compatible"
- You can also use any other capture-card that scLive supports to capture Canopus-compatible files with scLive.
- ScLive doesn't yet recognize if the canopus cards hardware dropped frames - this should not be a problem since these cards doesn't seem to drop frames at all while capturing (at least in all my tests). If frames can't be written to the harddisk quickly enough, ScLive still shows a dropped-frames messagebox.

#### USER COMMENTS - Just [download](#) and run the trial-version and see what these users are talking about:

- Just wanted to say "This product Kicks Ass!" and I am VERY glad to use it.
- The index feature works BEAUTIFULLY
- Finally, a way around the dreaded 2 and 4GB file limitations in Windows98!
- Thanks again for your nice software. I am very fortunate to have found your page, since I think the scLive will save tons of time, and actually make the capturing process enjoyable
- Great! worth the price !
- It does exactly what I want, and its a small executable that doesnt need to be installed.
- Compared to the cost of the camera, its a bargain.
- I have just registered scenalyzer live. Its just what I was looking for.
- Boy, is this program a time and equipment saver.
- I used to use [...], but from now on ScenalyzerLive will be my tool
- Fantastic program, you have done a good job.
- How can a programmer think so different? It can only be, that you are a DV user and did not find a

suitable DV capture. So you wrote it yourself. And the result is great - It would have saved me so much time which I can use with my son, who is the main actor in my movies.
